Sherlock es un script de PowerShell que nos permite buscar rápidamente todo el software instalado en el equipo que esté sin actualizar y tenga vulnerabilidades conocidas, permitiéndonos de esta forma explotarlos para ganar privilegios de administrador.

La ventaja de Sherlock es que es un único script, por lo tanto con copiar/descargar un archivo ya estás listo.

El script se puede descargar de aca: https://github.com/rasta-

mouse/Sherlock

Una vez que lo copiaste a la maquina víctima, tenés que ejecutar:

```
C:\Temp> powershell.exe -nop -exec bypass
```

PS C:\Temp> Import-Module .\Sherlock.ps1

PS C:\Temp> Find-AllVulns

Y eso te va a dar un reporte similar a este:
